

PRODUCT UPGRADE SHEET

LBP 1005 series replaced by LBP 1005SR

Rexnord FlatTop continuously develops new products for conveyors, but the current offering in the Rexnord®, MCC® and Marbett® product lines is also frequently reviewed: do these products still give the best fit to the needs of our customers and do they provide the best value for money? Therefore we have now decided to discontinue the LBP 1005 series MatTop® chains.

These chains will be replaced by **LBP 1005SR**, giving a **smaller backflex radius** capability. Old and new versions are **fully interchangeable** and can be connected without difficulties. Below is shown a comparison between both chain types; only the minimum possible **backflex radius** is different:

Old version			New version		
Chain type	Code number	backflex radius	Chain type	Code number	backflex radius
LBP 1005 XLA	877.03.xx	300 mm	LBP 1005SR XLA	877.17.xx	120 mm
LBPDP 1005 XLA	877.04.xx	300 mm	LBPDP 1005SR XLA	877.18.xx	120 mm

No modification is needed on sprockets; furthermore no changes are necessary to the conveyor.

In the same time Rexnord has improved the friction of the rollers, so now we can offer 25% extra **accumulation length**, with the same pressure on conveyed products as before the change. For example, if with the old version it was possible to make 6m long conveyors, with the new version it is 7.5 meters!

This product upgrade will not affect the prices.

If you have question regarding this topic, please contact your local Technical Support representative.
