

NEW PRODUCT INTRODUCTION SHEET

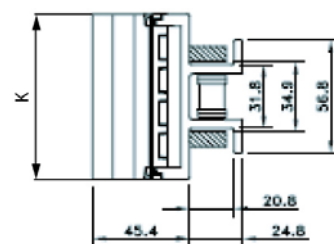

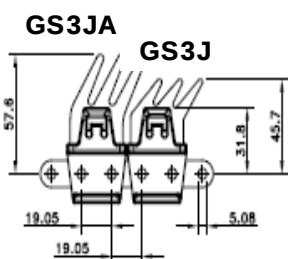

Plastic TableTop® Gripper Chains K325 and K450

Rexnord FlatTop introduces new version of gripper chains with width of 3.25" (82,5mm) and 4.50" (114,3mm). These new products are the answer to the need for more compact design of conveyors.

These chains will take advantage from **HP™** and **PS™** material to improve low friction properties as well as high speed capability.

The width of the rubber is exactly the same as the width of the chain for the best product handling.

Rubber elements can be replaced using a standard conical tip plier.

Old version K375 and K473 will be still available but on a made to order basis, please refer to the following table to find the best upgrade to the new widths.

No change in sprocket and track design will be necessary.
