

Pre-Announcement:

Upgrade RRHD(P) 2000 series modular belts

Rexnord FlatTop continuously develops new products for conveyors, and also the current offering in the Rex[®], MCC[®] and Marbett[®] product lines is frequently reviewed: do these products still give the best fit to the needs of our customers and do they provide the best value for money?

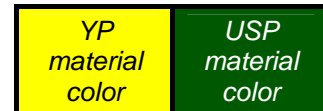

As a part of this process we have decided to discontinue RR(P) 2000 and upgrade it to RRHD(P) 2000, including a material improvement from XP polypropylene to Ultra Stabilized Polypropylene.

Beltseries	Design
 RRHD 2000 YP	 RRHD 2000 USP
<p>The RRHD 2000 in YP material is exactly the same design as the RRHD 2000 in USP material. The upgrade only impacts the material of the belt.</p>	

Material upgrade to USP

Rexnord is introducing USP material, replacing YP polypropylene, for improved durability and superior properties with respect to chemical resistance; this will result in a better machine reliability.

Planning & codenumbers

RRHD(P)2000 YP orders can be placed until 30 September 2007; after this date RRHD(P) 2000 can no longer be supplied in YP material.

Old version		New version	
Belt type	Code nr.	Belt type	Code nr.
RRHD 2000 YP	880.60.xx	RRHD 2000 USP	881.60.xx
RRHDP 2000 YP	880.90.xx	RRHDP 2000 USP	881.90.xx

Interchangeability

Old and new 2000-series belts are fully interchangeable and can be connected without difficulties. Sprockets and finger combs remain unchanged.
