## SG 1005 TCF: the optimum solution for returnable crate handling!

Rexnord has developed a new version of the well known SuperGrip 1005 series: SG 1005 TCF. This new type is the best available belt for metering and break conveyors for returnable crates.

TCF (left in the picture) stands for Tough Composite Friction top.

The light grey coloured material has proven to be two to three times more wear resistant than acetal in specific applications.

A new special clip has been designed, to retain the metal rods of the TCF-belt. The clips are flush with the edge of the belt and not exposed at the top surface of the belt. The new clip closes the hinge eye completely, offering a secure lock. The clip can be operated from the side and from below and can be re-used.

TCF belts have stainless steel pins, to offer maximum resistance to elongation (wear of hinge and pin).

The code number of the SG 1005 TCF is 877.71.xx [xx stands for width in mm].

The MatTop chain is optionally available with Double Positrack: SGDP 1005 TCF, code 877.72.xx.

100% rubber coverage is standard. However, upon request other patterns are possible.

If you have a question regarding this introduction, please contact your local Technical Support representative.
